

FOR OUR AEROSPACE & ADVANCED MANUFACTURING PARTNERS

CareerSource Brevard is pleased to offer the **Aero-Flex Pre-Apprenticeship Program**. Let us help you ensure your company's eligibility. We want you to benefit from this program that was created with your business in mind.

The beauty of this program is the FLEX in the name. You can elect add-on options in TRACK II that help those in training learn the skill sets you need at your facilities and work sites. In TRACK III, you can hone On-The-Job Training plans to meet the demands of your industry, products and capabilities.

BUILD YOUR WORKFORCE.

This infographic is designed to give a quick view of the three **TRACKS** that define the Aero-Flex program.

TRACK I is Work Readiness Training. It is Soft Skills Training that Brevard's employers tell us they need. Training includes important topics such as teamwork and collaboration, effective workforce communications, problem solving skills, and professionalism on the job.

FILL YOUR TALENT PIPELINE.

Track II is comprehensive skills training. It is 3-8 weeks of online training modules at ToolingU, an industry-respected and nationally accredited training partner. Core modules include health & safety, materials handling, electronics, shop essentials (which requires applied math skills), and measuring and improving work. **All this occurs prior to Track III** where you'll gain employees who are ready to earn and learn.

Contact your Aero-Flex team:

Clinton Hatcher at (321) 394-0685 or Lori Robinson at (321) 394-0532
or employersupport@careersourcebrevard.com

YOUR NEXT STEP. Let CareerSource Brevard answer your questions. We will run through the steps we take to screen all candidates for TRACK I. We will ensure you are comfortable with the vetting process that occurs, the TRACK I elements, how a candidate moves on to TRACK II, and what must occur before a candidate makes it to TRACK III. Last, we'll talk FLEX: We will get to know what specifics are critical to your company's worker training objectives, and help you see how Aero-Flex fits.
